RE: PROFESSIONAL VOICE MESSAGING

Dear Jerry:

This letter is written in an effort to discuss the advantages of professional voice messaging. I speak from experience in both a busy private practice, as well as a consultative cardiology practice in a university setting. In both of these situations it is very advantageous that professionals be able to immediately contact one another for patient care concerns. In the scenario both referring and consulting physicians are linked in a system, effective and efficient communication is facilitated. I can strongly recommend your system of professional voice messaging as one which provides optimal service and a minimum of technical glitches. I would be more than happy to discuss, in person, this system with any potential customer. I have no reservations recommending your system to expanded markets.

Thank you for the opportunity to express an opinion in this matter.

Sincerely,

Jerry J. Lierl, M.D.

JJL/sjh
